How to create a UI/HTML page to run the Ansible script inside the Ubuntu server step by step?

2 / 2 >

Creating a web-based UI/HTML page to run an Ansible script on an Ubuntu server involves several steps. You'll need to use a combination of HTML for the user interface, a web server to serve the HTML page, and possibly some server-side scripting (e.g., Python or PHP) to execute the Ansible script. Here's a high-level step-by-step guide:

1. Set Up Your Ubuntu Server:

Ensure you have a functioning Ubuntu server where Ansible is installed. If Ansible isn't installed, you can do so using `apt-get`:

```
bash
```

Copy code

```
sudo apt-get update
sudo apt-get install ansible
```

2. Create an Ansible Playbook:

Write the Ansible playbook that you want to execute. Store this playbook on the Ubuntu server.

3. Install a Web Server:

You need a web server to serve your HTML page. Apache is a popular choice. You can install it using:

```
bash
```

Copy code

```
sudo apt-get install apache2
```

4. Create an HTML Page:

Create an HTML page (e.g., `index.html`) that will serve as your UI. You can use a simple
